

tf. asp - citrix hosting service

This service is ideal for those looking to take the hassle away from managing the IT aspects of running a property management system.

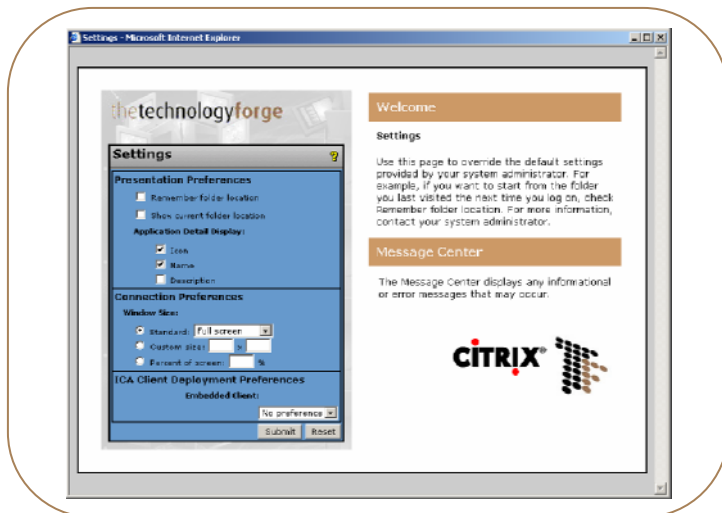

Running through a Citrix Server hosted by The Technology Forge, the tf. asp application allows users to access the TF product suite securely through an Internet browser. Acting as application service providers, we are able to manage and maintain your property database centrally so you can avoid using your internal network.

With a browser enabled interface to tf. facility, you can send and retrieve data directly to and from the database, eliminating the need to have the system installed onto your individual PC. Survey data, for example, can be transferred by internal and/or external surveyors from a location convenient to them, through the tf. asp application via the Internet.

tf. facility is held on our secure server farm and maintained centrally, ensuring easy access for all users. tf. asp can be accessed from any pc with a compatible web browser.

Main functions:

- Accessible through compatible web browser
- Handheld enabled
- No software to download
- Dedicated storage area
- Automatic inactivity log out
- Advanced audit features
- Secure 128bit SSL environment
- Regular routine backups of your data

"The Technology Forge has been hosting our applications for a number of years and through our pragmatic and open approach, our customers have gained the predicted business benefits. We are able to provide a level of service unachievable using conventional delivery mechanisms. Our customers really notice the benefit."

Mark Wardman, MD, The Technology Forge

the benefits

- Reduced capital expenditure and operating costs - no requirement to purchase hardware & software
- No need to recruit, train and retain IT staff
- Aids home working and hot-desking – applications accessible anywhere via the web
- Collaborative working – share data and applications
- Rapid project start-up - infrastructure is immediately available
- Service level agreements easy to set up and monitor
- Software updates are automatically applied
